37	additional-providers-check	35	DECISION POINT: Additional providers needed

Flow Logic

Main Flow (Steps 1-9)

- User completes Steps 1-8 sequentially
- At Step 9 (provider-type-selection), the system automatically determines the workflow based on provider enrollment status
 - New Provider** (if any providers need enrollment) → Navigate to Step 24 (index 22)
 - Existing Provider** (if all providers are already enrolled) → Navigate to Step 11 (index 9)
 - Mixed Status:** If there's a mix of new and existing providers, the system prioritizes the New Provider workflow first, enrolling all new providers before adding existing providers.

Existing Provider Flow (Steps 11-23)

- **Yes** → Save current provider, loop provider-open-cics, index 9)
- **No** → Navigate to final completion

- At Step 37 (additional-providers-check), user decides:
 - **Yes** → Save current provider, loop back to Step 24 (create-enrollment, index 22)
 - **No** → Save current provider, navigate to Step 11 (existing-provider-open-cics, index 9)

New Provider Loop (Step 37 “Yes”)

When “Yes” is selected at Step 37: 1. Current provider data is saved to enrolledProviders array 2. Provider-specific form data is cleared 3. providerEnrollmentType is set to ‘New Provider’ 4. Navigate directly back to Step 24 (create-enrollment, index 22) 5. Loop repeats: User goes through Steps 24-37 again for each additional new provider

Existing Provider Loop (Step 23 “Yes”)

When “Yes” is selected at Step 23: 1. Current provider data is saved to enrolledProviders array 2. Existing provider-specific form data is cleared 3. providerEnrollmentType remains ‘Existing Provider’ 4. Navigate directly back to Step 11 (existing-provider-open-cics, index 9) 5. Loop repeats: User goes through Steps 11-23 again for each additional existing provider

Completion Flow (Step 37 “No” or Step 23 “No”)

From Step 37 “No” (New Provider path): 1. Final provider data is saved to enrolledProviders array 2. providerEnrollmentType is set to ‘Existing Provider’ to enable access to completion steps 3. Navigate directly to Step 11 (existing-provider-open-cics, index 9) 4. Continue through Steps 11-23 to add all providers to the group

From Step 23 “No” (Existing Provider path): 1. Final provider data is saved to enrolledProviders array 2. Navigate to final completion page 3. Workflow complete

Code Organization

The implementation in index.html is organized into clearly labeled sections: - **ICON COMPONENTS** - SVG icon components used throughout the UI - **MAIN FORM COMPONENT** - Main WalkthroughForm with state variables, reference images, and helper functions - **PAGES CONFIGURATION (44 Pages)** - All walkthrough pages organized by workflow section - **VALIDATION & PAGE LOGIC** - Page validation and conditional display functions - **EVENT HANDLERS** - Navigation and form event handling functions - **COMPONENT RENDERING** - Main JSX rendering logic - **MODAL COMPONENTS** - All modal dialogs (Image, Outreach Notes, Enrollment Providers, etc.) - **APPLICATION INITIALIZATION** - Root DOM rendering

Key Navigation Points

The main navigation logic is located in the **EVENT HANDLERS** section of index.html:

New Provider Loop Handlers

1. **Step 37 “Yes” Handler** (additional-providers-check with “Yes”)
 - Saves provider data to enrolledProviders
 - Clears provider-specific form fields
 - Sets providerEnrollmentType to ‘New Provider’
 - Navigates directly to create-enrollment (Step 24, index 22)
 - This implements the “Repeat Steps 24-36” loop for adding new providers
2. **Step 37 “No” Handler** (additional-providers-check with “No”)
 - Saves final provider data to enrolledProviders
 - Sets providerEnrollmentType to ‘Existing Provider’
 - Navigates to existing-provider-open-cics (Step 11, index 9)
 - Enables access to completion steps (Steps 11-23)

Existing Provider Loop Handlers

3. **Step 23 “Yes” Handler** (existing-provider-completion with “Yes”)
 - Saves provider data to enrolledProviders
 - Clears existing provider-specific form fields
 - Keeps providerEnrollmentType as ‘Existing Provider’
 - Navigates directly to existing-provider-open-cics (Step 11, index 9)
 - This implements the loop for adding multiple existing providers to the group
4. **Step 23 “No” Handler** (existing-provider-completion with “No”)
 - Saves final provider data to enrolledProviders
 - Navigates to final completion page
 - Completes the entire workflow

Flow Validation

The implementation correctly handles: - ✓ Sequential flow through Steps 1-9 - ✓ Auto-branching at Step 9 based on provider enrollment status with priority logic: - New Provider workflow takes priority if any providers need enrollment - All new providers are enrolled before existing providers are added - ✓ Existing Provider path (Steps 11-23) - ✓ New Provider path (Steps 24-37) - ✓ New Provider loop (Step 37 “Yes” → Step 24) - ✓ Existing Provider loop (Step 23 “Yes” → Step 11) - ✓ Transition from New Provider to Existing Provider workflow (Step 37 “No” → Step 11) - ✓ Final completion from Existing Provider workflow (Step 23 “No” → Final completion) - ✓ Proper provider enrollment data tracking in enrolledProviders array - ✓ Proper providerEnrollmentType management for conditional page display

36	enroll-on-mainframe	34	Enroll on mainframe
37	additional-providers-check	35	DECISION POINT: Additional providers needed

Flow Logic

Main Flow (Steps 1-9)

 - User completes Steps 1-8 sequentially
 - At Step 9 (provider-type-selection), the system automatically determines the workflow based on provider enrollment status:
 - New Provider** (if any providers need enrollment) → Navigate to Step 24 (index 22)
 - Existing Provider** (if all providers are already enrolled) → Navigate to Step 11 (index 9)
 - Mixed Status**: If there's a mix of new and existing providers, the system prioritizes the New Provider workflow first, enrolling all new providers before adding existing providers

Existing Provider Flow (Steps 11-23)

 - Conditional display based on: `providerEnrollmentType === 'Existing Provider'`
 - All pages from index 9-21 are shown when this condition is met
 - At Step 23 (existing-provider-completion), user decides:
 - Yes** → Save current provider, loop back to Step 11 (existing-provider-open-cics, index 9)
 - No** → Navigate to final completion page

New Provider Flow (Steps 24-37)

 - Conditional display based on: `providerEnrollmentType === 'New Provider'`
 - All pages from index 22-35 are shown when this condition is met
 - At Step 37 (additional-providers-check), user decides:
 - Yes** → Save current provider, loop back to Step 24 (create-enrollment, index 22)
 - No** → Save current provider, navigate to Step 11 (existing-provider-open-cics, index 9)

New Provider Loop (Step 37 "Yes")

When "Yes" is selected at Step 37: 1. Current provider data is saved to `enrolledProviders` array 2. Provider-specific form data is cleared 3. `providerEnrollmentType` is set to 'New Provider' 4. Navigate directly back to Step 11 (existing-provider-open-cics, index 9) 5. Loop repeats: User goes through Steps 11-23 again for each additional new provider

Existing Provider Loop (Step 23 "Yes")

When "Yes" is selected at Step 23: 1. Current provider data is saved to `enrolledProviders` array 2. Existing provider-specific form data is cleared 3. `providerEnrollmentType` remains 'Existing Provider' 4. Navigate directly back to Step 11 (existing-provider-open-cics, index 9) 5. Loop repeats: User goes through Steps 11-23 again for each additional existing provider

Completion Flow (Step 37 "No" or Step 23 "No")

From Step 37 "No" (New Provider path): 1. Final provider data is saved to `enrolledProviders` array 2. `providerEnrollmentType` is set to 'Existing Provider' to enable access to completion steps 3. Navigate directly to Step 11 (existing-provider-open-cics, index 9) 4. Continue through Steps 11-23 to add all providers to the group

From Step 23 "No" (Existing Provider path): 1. Final provider data is saved to `enrolledProviders` array 2. Navigate to final completion page 3. Workflow complete

Code Organization

The implementation in index.html is organized into clearly labeled sections: - **ICON COMPONENTS** - SVG icon components used throughout the UI - **MAIN FORM COMPONENT** - Main WalkthroughForm with state variables, reference images, and helper functions - **PAGES CONFIGURATION (44 Pages)** - All walkthrough pages organized by workflow section - **VALIDATION & PAGE LOGIC** - Page validation and conditional display functions - **EVENT HANDLERS** - Navigation and form event handling functions - **COMPONENT RENDERING** - Main JSX rendering logic - **MODAL COMPONENTS** - All modal dialogs (Image, Outreach Notes, Enrollment Providers, etc.) - **APPLICATION INITIALIZATION** - Root DOM rendering

Key Navigation Points

The main navigation logic is located in the **EVENT HANDLERS** section of index.html:

New Provider Loop Handlers

 - Step 37 "Yes" Handler** (additional-providers-check with "Yes")
 - Saves provider data to `enrolledProviders`
 - Clears provider-specific form fields
 - Sets `providerEnrollmentType` to 'New Provider'
 - Navigates directly to create-enrollment (Step 24, index 22)
 - This implements the "Repeat Steps 24-36" loop for additional new providers
 - Step 37 "No" Handler** (additional-providers-check with "No")
 - Saves final provider data to `enrolledProviders`
 - Sets `providerEnrollmentType` to 'Existing Provider'
 - Navigates to existing-provider-open-cics (Step 11, index 9)
 - Enables access to completion steps (Steps 11-23)

Existing Provider Loop Handlers

 - Step 23 "Yes" Handler** (existing-provider-completion with "Yes")
 - Saves provider data to `enrolledProviders`
 - Clears existing provider-specific form fields
 - Keeps `providerEnrollmentType` as 'Existing Provider'
 - Navigates directly to existing-provider-open-cics (Step 11, index 9)
 - This implements the loop for adding multiple existing providers to the group
 - Step 23 "No" Handler** (existing-provider-completion with "No")
 - Saves final provider data to `enrolledProviders`
 - Navigates to final completion page
 - Completes the entire workflow

Flow Validation

The implementation correctly handles: - ✓ Sequential flow through Steps 1-9 - ✓ Auto-branching at Step 9 based on provider enrollment status with priority logic: - New Provider workflow takes priority if any providers need enrollment - All new providers are enrolled before existing providers are added - ✓ Existing Provider path (Steps 11-23) - ✓ New Provider path (Steps 24-37) - ✓ New Provider loop (Step 37 "Yes" → Step 24) - ✓ Existing Provider loop (Step 23 "Yes" → Step 11) - ✓ Transition from New Provider to Existing Provider workflow (Step 37 "No" → Step 11) - ✓ Final completion from Existing Provider workflow (Step 23 "No" → Final completion) - ✓ Proper enrollment data tracking in `enrolledProviders` array - ✓ Proper `providerEnrollmentType` management for conditional page display
